PETITIONS OFFICE

Applicant Statement

I wish the following to be noted in the file of the above patent application in the United States of America for my invention the 'Sharp Safe Hydraulic Retractable Syringe'.

I filed Australian provisional patent application PR1588 on 21 November 2000.

I included a certified copy of PR1588 in an application sent by me via International Express Post to the USPTO and mailed 5 November 2001, and I cited PR1588 within this application as the priority document under Convention.

The application was not delivered to the USPTO but was diverted, without my knowledge, to a mail point in Baltimore, Maryland. There the parcel was opened, and a self-addressed stamped postcard, marked to the attention of the USPTO RECEIVING OFFICER, was stamped accordingly and sent to me at my home in Australia.

I maintain that this act seriously compromised the confidential nature of the application, as the parcel was not directly received by an Officer of the USPTO, but was opened presumably by an Officer of the US Post Office, who then posted the above referred to post card to me. All of which was without my knowledge nor consent and also contrary to the written instructions as to the address and to whom the attention was clearly marked.

The matter of recognition of the priority date now is in question with the USPTO because the International Express Post article containing the application was diverted from its designated address and therefore did not reach the USPTO within the prescribed period.

I herein state that in the event of another party filing for patent or using any of the contents of the above application it is my intention to call upon the contents of the file in my name for the purpose of providing evidence as to the nature of proceeding with regards this application and the existence of a confidentiality compromise on the part of the USPTO in the process of filing this application.
